

Since the day I was born I suffered with chronic allergies, asthma, ear infections, behavioral issues and bedwetting problems. Every week my parents would take me for dozens of allergies shots, I was on prescription inhalers for my asthma and by the time I was two years old I had been in surgery twice for ear tubes because of chronic ear infections. My parents were spending thousands of dollars a month taking me to medical specialist, buying medications and special foods for me to eat.

My problems continued throughout the years until I was about seven years old when my parents started seeing a chiropractor. Our chiropractor, just like Friends & Family Chiropractic, was very family centered and understood the benefits that chiropractic has for children. Because of this he insisted that my parents bring me in for care. After that my health issues completely resolved. I am no longer on any medications for any condition. I no longer suffer any of the above mentioned problems, I don't even get allergies with the GA pollen. Chiropractic truly saved my life and I am forever grateful and dedicated to this profession and to the people that it can help!
