

I first went to a chiropractor to help resolve some low back pain that i was experiencing. I was 28 years old when i received my first adjustment. My low back pain was quickly resolved within the first few visits. What i didn't realize then was that the chiropractic adjustment would also resolve my migraine headaches. Up until this time i had been having an average of 1 migraine ever 3 weeks. During these episodes I experienced visual disturbances, extreme nausea, vomiting, weakness and sometimes incoherent speech. I am extremely proud to say that since my FIRST adjustment i have not had a single migraine headache (9 Year). It just goes to show that when you realign the spine and get the nerve system working optimally the body can heal from anything. Thanks Chiropractic
